

Features of Euro style entry door construction

Heavy duty adjustable Zenit ball bearing hinges. Positioned to take the weight of a heavy door. Hinges can also be positioned the normal way.

Many panel designs are available. Raised panels, flat panels, planked panels are just a few. Because the doors are so thick insulation can usually be added between the panels.

Shown is a planked panel with decorative hand forged clavos

The thick door frame is integral with the door for support of hinges and locks. This is a good system for large and heavy entry doors. The Rough opening sizes need to be larger than conventional doors. We can provide sizes

Many glass options are available. Clear insulated, decorative, art glass and beveled glass are available. Divided lights can be true (TDL) or simulated (SDL).

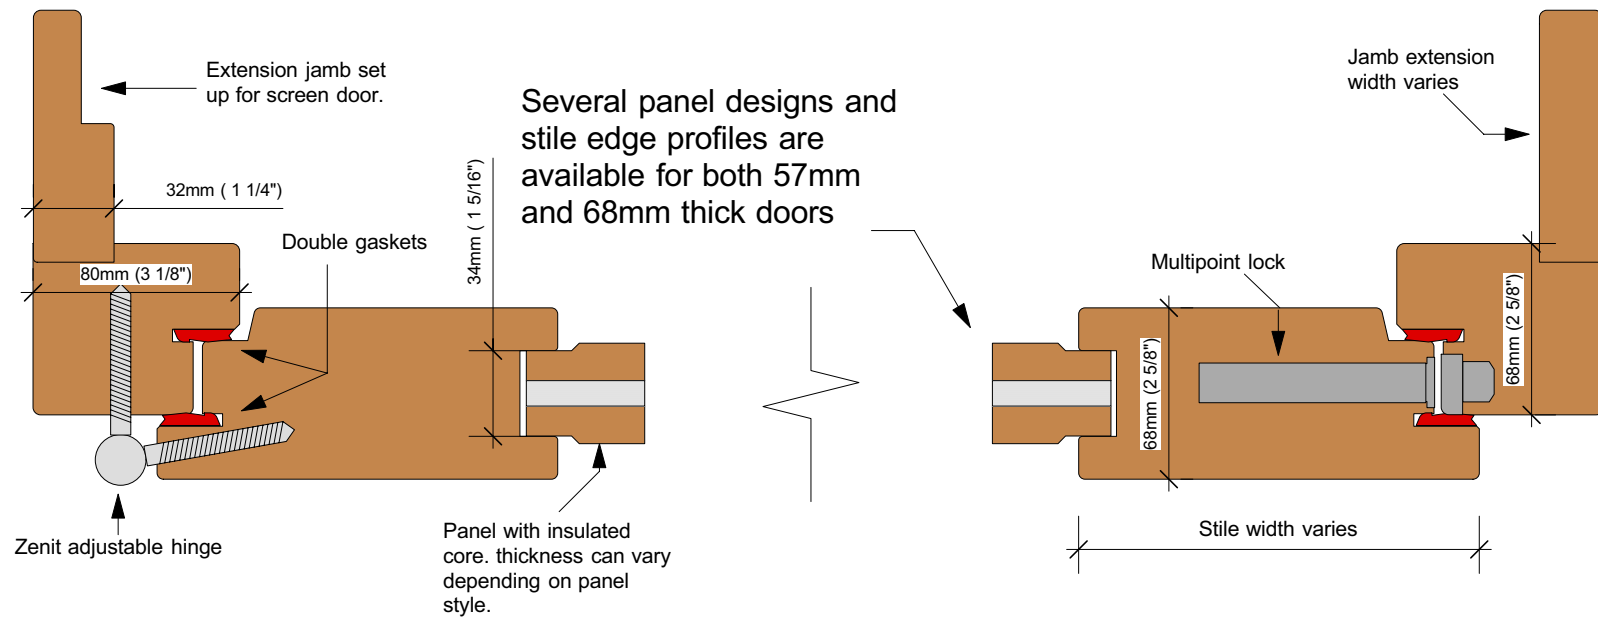

Single or multipoint locking with many trim choices and up to 5 locking points

This door has a simple eased square stile edge. Traditional, contemporary and rustic profiles are available

Door thickness can be 57mm (2 1/4") or 68mm (2 5/8")

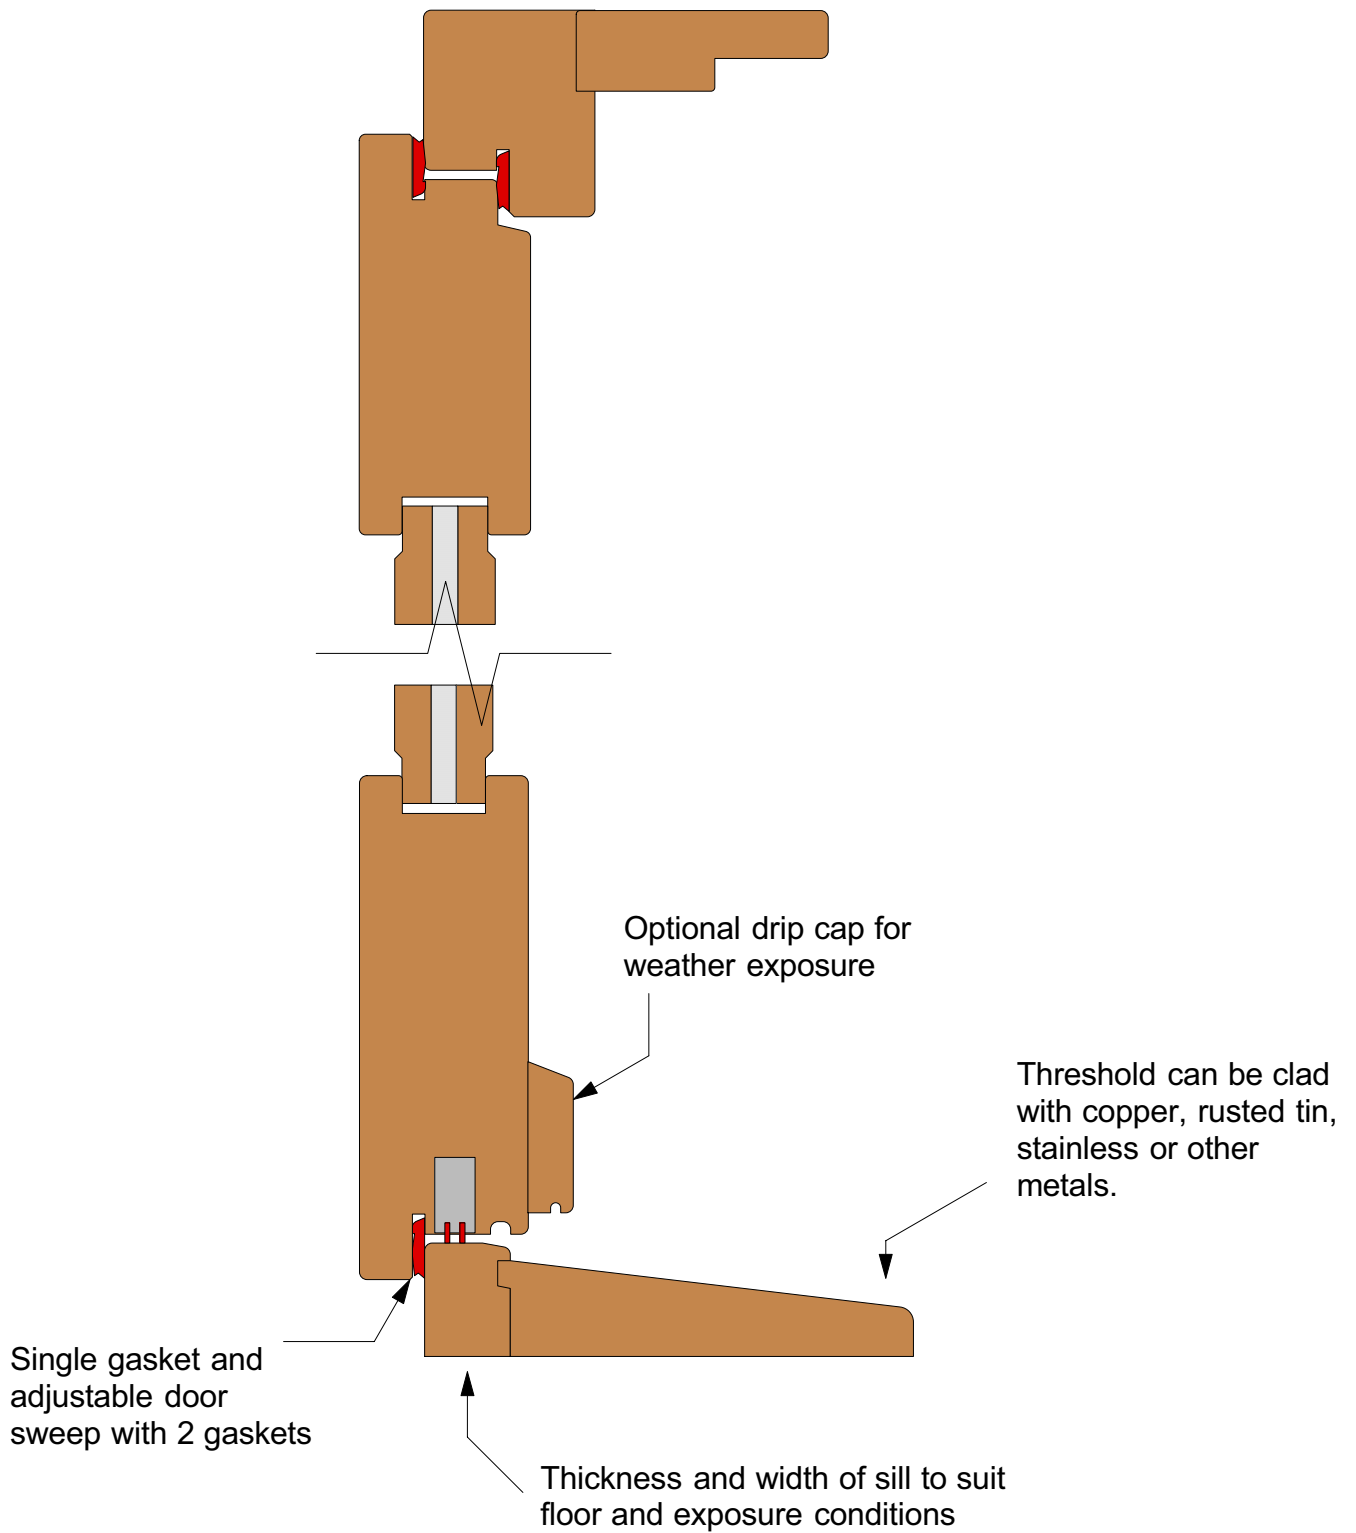

Many threshold details available depending in weather exposure

Horizontal section of 68mm (2 5/8") thick door
